

XProtect Transact® directly links video with transaction data from POS or ATMs. Transactions and corresponding video can be monitored live or viewed later. You can perform a text search on one cash register/till at a time to identify transactions with, for example, gift cards, credit cards, coupons or returned merchandise. Whether your challenge is shrinkage, fraud or you simply want to validate a transaction, XProtect Transact will help identify problems and protect your business, customers and employees. It is also easy to quickly export and distribute evidence, including video and transaction data.

XProtect Transact integrates with the following XProtect® products: XProtect® Express, XProtect® Professional, XProtect® Enterprise and XProtect® Corporate.
