

Fiber Optic Mode Conditioning Patch Cable (LC Mode Conditioning to SC), 2M (6-ft.)

MODEL NUMBER: **N425-02M**

Highlights

- Converts Singlemode LC GBIC to Multimode SC Patch Panel
- 62.5/125 and 8.3/125
- Run 1000Base-LX Gigabit Ethernet over MMF by offsetting signal loss

Package Includes

- LC Mode Conditioning to SC Fiber Optic Patch Cable, 2M (6-ft.)

Description

Tripp Lites Mode Conditioning Cables are designed for use in Gigabit Ethernet 1000BASE-LX applications. N425-Series cables convert a Singlemode LC GBIC to an SC Multimode patch bay. They are fully compliant with IEEE 802.3z application standards. Mode Conditioning Cables are needed in applications where high-speed Gigabit 1000BASE-LX routers and switches are being deployed into existing Multimode plants. The need for this patch cord is due to the single-mode launch nature of the -LX or long-wave (1300 nm) transceiver modules used for Gigabit Ethernet. Launching a single-mode laser into the center of a multimode fiber can cause multiple signals to be generated that confuses the receiver at the other end of the fiber. These multiple signals, caused by Differential Mode Delay (DMD) effects, severely limit the cable distance lengths for operating Gigabit Ethernet. A mode conditioning patch cord eliminates these multiple signals by allowing the single-mode launch to be offset away from the center of a multimode fiber.

Features

- Use LC GBIC Singlemode Transceivers on Multimode Fiber Backbones with SC patch bays
- 62.5/125 and 8.3/125
- Offsets the Singlemode Laser launch from the center of a Multimode fiber
- Available in a variety of connector combinations

Specifications

INPUT	
Cable Length (ft.)	6
Cable Length (m)	2
PHYSICAL	
Color	Orange; Yellow

Tripp Lite
