The Chipless Head

The latest addition to the Ilco® Modular Key System

Maximize profits from transponder harvesting with the Ilco Chipless Head.

This unique head design complements the exiting Modular System by utilizing the EB3 blades while enabling you to harvest transponders from miscut, old and/or discarded keys. Transponders are secured in a custom designed carrier that fits into the head.

The Chipless Head

With the Ilco® Modular Key System, harvesting is even more profitable. The EH3C Chipless Head fits all 21 existing Modular Key Blades and one new GM blade (for EH3C head only).

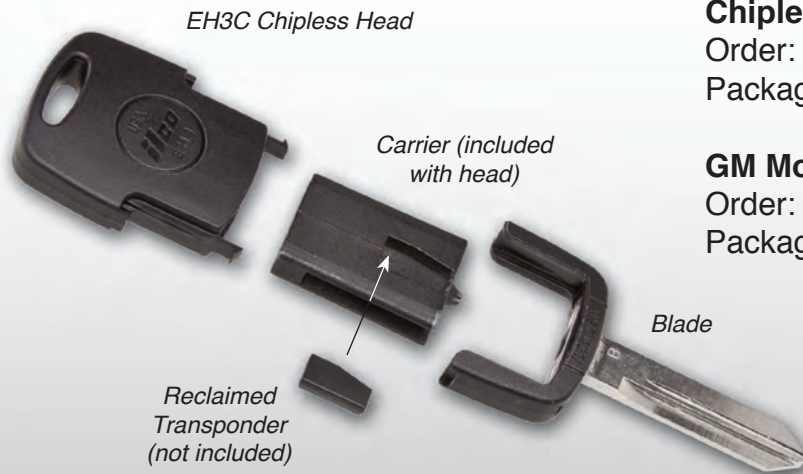

Harvest, recycle, re-chip, recover the transponders (chip or capsule type) from miscut, broken, old and/or discarded keys and place them in the Ilco EH3C head.

By integrating the Chipless Head into the existing Ilco Modular Key System, security professionals can increase the applications of the existing key blades and further reduce their inventory.

The complete Ilco Modular Key System consists of 3 heads and 22 blades. Whether you are cloning, programming or harvesting, the Ilco system covers 95% of the vehicles on the roads today.

The Carrier has four custom pockets for specific styles of transponders. This design assures you of accurate positioning of the transponder.

Chipless Head

Order: EH3C

Packaged 5 per bag/25 per box

GM Modular Chipless Blade (for EH3C only)

Order: EB3-Y-B99 GM Chipless Blade
