TE Connectivity's (TE) BF Series offers a locking style control ideal for industrial and commercial lighting applications.

The BF Series is engineered to meet the needs of virtually every outdoor lighting control application utilizing HID luminaires with locking style receptacles. Typical applications include parking lots, security lighting, street, and other types of area lighting.

Controls include a heavy-duty thermal bi-metal switch that provides a 30 - 45 second time delay. This virtually eliminates unwanted lamp cycling that could be caused by lightning, car headlights, or other sudden changes in ambient light level. BF controls are also equipped with 180 Joule MOV to protect both the photocontrol and luminaire from sudden surges in line voltage.

Customers can count on consistent, high quality products, driven by TE's proven innovation and backed by our extraordinary customer support.

BF Series Photocontrol
